DETAILED ACTION

This is an allowance in response to the amendment and new claims files 10-4-2010.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey K. Mills on 12-17-2010.

The application has been amended as follows:

Please cancel claims 67-75, and cancel claims 78-93 which were previously withdrawn.

Allowable Subject Matter

2. Claims 94-101 are allowed over the prior art of record.

3. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose singly or in combination the claimed method as set forth in claim 94, particularly, curing a polymerizable lens material while forming a biocompatible sensor with a molecular sensing moiety in the form of a reflection hologram in such lens, with such curing and forming taking place simultaneously by directing an incident beam of coherent light

through a first molding surface to the crosslinkable and/or polymerizable fluid material and to a mirror, wherein the incident beam and a beam reflected by the mirror form the pattern while polymerizing/crosslinking the crosslinkable fluid material to form the biocompatible sensor, whereby the pattern is recorded in the biocompatible sensor to form the reflection hologram.

4. The closest prior art of record, Millington (US 2003/0103868), teaches forming a reflection hologram [0008] in the form of a biocompatible holographic sensor [Abs] which can be in a curable lens material [0023], but does not disclose mold structure details, or a molding process that cures/polymerizes and forms the hologram by placing a mirror behind/on a second molding surface that reflects incident light coming from the first molding surface.

5. Related prior art Zhang et al (US 2002/0093701) teach molding a lens with a hologram or holographic optical element that allows a wearer to switch between multiple optical powers [0001], as well as a general contact lens mold [0087] and a molding process for said lens and hologram [0088-0089], but do not teach a molding process that cures/polymerizes and forms the hologram by placing a mirror behind/on a second molding surface that reflects incident light coming from the first molding surface.

Therefor Zhang et al ('701) do not cure the deficiencies of Millington.

6. Other related prior art of record, Zhang et al (WO 99/33642) teach molding details of a corrective optical lens with a volume holographic element, but do not cure the deficiencies of Millington and Zhang et al ('701).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
